Whether you're learning how to sew on a mini sewing machine, or you're using a mini machine as an alternative to a heavierduty machine, you'll enjoy the ease and portability of your new sewing tool. You'll want to refer to the instruction manual to familiarize yourself with the correct process for threading your machine and adjusting the settings. In general, though, you'll thread and operate your mini machine much like you would a standard machine. Although you can control the upanddown movement of the needle by pressing the foot pedal, you can choose whether you want the needle to move quickly or slowly with the speed setting.

Many mini sewing machines come with a button for controlling this. Check the machine's manual to for instructions on how to control your machine's speed. Andrea has over 20 years in the fashion design and marketing industries and specializes in pattern making, draping, and the construction of garments. She holds a BS in Fashion Design and Merchandising from the University of North Carolina at Greensboro. Make sure to read through the manual before you start, and keep it handy in case you need to do any troubleshooting. However, you can find some small models that are designed for that purpose. Make sure to read the specifications on the machine or talk to a knowledgeable sewing machine vendor so you know what your machine can do. The system should be labeled on the package that your needles come in. You'll also need to pick the right kind of needle for the type of thread you're using and the kind of fabric you want to sew. For example, a universal needle will work on most fabrics, but a ballpoint and stretch needle is better for loose knits and stretchy fabrics, like Lycra. Fully extend the thread spindle by pulling it directly upwards. Then, slide a spool of thread onto the spindle. You can place a bobbin here instead of using a full-sized spool for the top thread. To use this secondary bobbin spindle,

remove the cap and slide the bobbin onto the post. Then push the cap back on so the bobbin clicks into place securely. Keep the machine turned off while you thread it to avoid any accidents. With the spool of thread positioned on the thread spindle, wrap the loose end of the thread around the central post of the bobbin about 4 or 5 times in a counterclockwise direction. Press the bobbin onto the winding post, which is in the center of the hand wheel on many mini sewing machines. Hold the thread out with your hands, turn on the machine, and press down on the foot pedal. When the bobbin is completely full, cut the thread to separate the bobbin from the spool. Usually, you'll pass the thread through a series of holes or hooks called thread guides along the way. After this, you'll direct the thread through a hole or hook on the takeup lever, which moves up and down and is located on the left half of the machine, above the needle. Finally you'll draw the thread down towards the needle, often passing through a hole below the takeup lever and another right above the needle. Use the hand wheel to bring the needle to its highest point. Then push the thread through the eye from front to back or left to right, depending on the position of the needle. Trim the end of the thread so that it's smooth and not frayed, and wet it with your tongue to keep the fibers together. Once the needle is threaded, tug about 5 in 13 cm of thread towards the back. This will prevent it from slipping back through the eye as you begin moving the machine's mechanisms.

Pick up the bobbin and press it into the bobbinshaped chamber. The bobbin should be sitting horizontally in the compartment, with the thread winding around it in a counterclockwise direction. You'll usually need to slip the bobbin thread behind a narrow strip of metal or plastic to keep it in alignment, but check the machine's threading instructions for guidance. Slide it off, either towards the left if the bobbin compartment is to the left of the needle or towards you if the compartment is directly in front of the needle. The bobbin thread should match the color and fiber content of the top spool of thread you're using. Use your right hand to turn the hand wheel on the right side of the machine towards you. This will move the needle down and the top thread will catch the bobbin thread. If your machine has a thread channel next to the bobbin compartment, you can slip both threads into this channel to line them up while you turn the hand wheel. Make sure you're still holding the loose ends firmly. It will pull a loop of bobbin thread up through the gap between the feed dogs metal bars featuring a toothy texture. Tug on this loop out so that the loose end of the bobbin thread comes out of the bobbin compartment. Pull the loose ends of both threads towards the back of the machine, passing them under the presser foot. Now you have a correctly threaded machine. Slide the bobbin compartment cover back into place when you're done. If your machine uses a power cord, plug the pronged end of the power cord into the power source. Plug the other end into the correct slot it's usually labeled on the lower right side of the machine. It's usually labeled and will be located near the slot for the power cord. With your machine situated on your work table, and your chair set up in at the table, position the foot pedal on the floor. Your right foot should be able to comfortably reach and press the pedal. Think of the foot pedal like the gas pedal of a car.

<http://www.dimalcco.com/images/canon-mp460-manual-online.pdf>

When you press it, the machine will run. Then, push the presser foot lever upwards with your left hand to raise the presser foot. The lever can usually be found on the back of the machine. With both mechanisms lifted, slip the edge of the fabric underneath the presser foot. Center the fabric you want to stitch directly under the needle. Align the fabric so that only about 12 in 1.3 cm of fabric extends past the needle. The end of the fabric should align with the back side of the presser foot. If you don't have enough fabric past the needle to begin with, it might get sucked down between the presser feet. This will jam up the machine. You should never sew directly over pins. Remove any pins as you go, before sewing the seam. Then turn the hand wheel to lower the needle into the fabric. This will ensure your stitching gets off to a good start and that the machine doesn't come unthreaded. Press the foot pedal with your right foot, as you would press the gas pedal on a car, to engage the

machine and begin stitching. Use your hands to gently guide the fabric, but keep them well away from the needle for safety. You can press the backstitch button or lever usually located on the front of the machine to make a few stitches in the opposite direction. Do this at the start and end of your row of stitches to prevent them from unraveling. Pull up the presser foot lever to lift the presser foot as well. With the fabric freed up, you can pull it out from under the machine's mechanisms. You also don't want to tug on the fabric too hard as this could break the needle. Pull both threads taut over the blade and tug firmly to cut it. Alternatively, you can use a pair of snips or scissors to trim the thread. If you have the opposite problem, with tight top stitches and loose bottom stitches, turn the tension dial counterclockwise to loosen the tension on the top thread. Sometimes it will feature numbers to indicate which tension setting you're using.

If you're switching between thin fabric and thick fabric or bulky layers of material, you'll likely need to adjust the tension. It's always useful to do a test row of stitches on a scrap piece of your fabric to see if you need to adjust the tension. Many mini sewing machines come with a button for controlling this. If you push the button inwards, it'll select the low speed setting, and if you leave it outwards, it'll operate on the high speed setting. Check the machine's manual for instructions on how to control your machine's speed. Typically these can be controlled by twisting a dial which is printed with each stitch type, as well as another dial or switch that selects the stitch length. Select the stitch type and length before you begin sewing, not while you're sewing.
