bosch high speed positioning system installation manual

For example, the HSPS offers a variety of Dinion XF and Dinion 2X cameras and lens combinations, and the system can be ordered with two Bosch AEGIS UFLED Infrared Illuminators for operation in dark environments. Automatic lens scaling, which keeps zoom and speed synchronized, ensures smooth video pictures throughout pan and tilt movement. A completely self-contained unit, the HighSpeed Positioning System is easy to install and maintain. Multi protocol capabilities, including Bilinx and Biphase, also simplify connections. All units have a sunshield and an integrated wiper. The wiper is available with an optional washer. The IR 360 system features two local alarm inputs, one input for synchronizing the infrared lighting and one relay output for an intelligent local alarm. System Overview. The modular design allows you to customize an HSPS to fit your specific application. To build an HSPS, select one option from Modules A and B. In addition, you may further customize your HSPS by selecting an optional mounting solution from Module C and two optional illuminators from Module D. Module A Camera and Lens Combination Choose from a selection of Bosch Dinion cameras and lenses. This module comes preassembled and attached to a sled that is installed inside the HSPS housing. Pans up to 100 per second, 360 continuous rotation. The Auto Black switch caps the lens to exclude all light and automatically sets the camera's circuitry to produce a standard black reference level. The Privacy Masking feature with 4 separate programmable privacy zones can be used to block specific parts of a scene. On motion detection, the camera displays an alarm in the video signal, closes the output relay or transmits an alarm message via Bilinx. With the global scene change detector, it reduces false alarms that can be caused by sudden changes in lighting condition for instance, switching on or off the indoor or security lighting. The builtin IR filter automatically switches from color to monochrome either by sensing the illumination level or through the alarm input. With Default Shutter, the camera can capture high speed moving objects when sufficient light is available, and the shutter speed returns to default value under low light conditions to maintain sensitivity. With the multilanguage OSD Onscreen Display, power and alarm connections, and a builtin test pattern generator, the camera is easy to install. It is suitable for applications such as tunnels, car parks, prisons, ports, military facilities, casinos, and gambling centers. It comes with preposition and manual override settings. The 15bit digital signal processing and XF Dynamic help provide enhanced dynamic range. With 3 preprogrammed modes, the camera supports typical applications; the modes can also be programmed for individual requirements. You can easily switch between modes using Bilinx or the external alarm input. Bilinx technology allows you to change the camera

With the BLC feature, the LTC 0485 Camera adjusts video gain to correct the exposure when the object being captured is in front of a bright light source. On motion detection, the camera displays an alarm in the video signal, closes the output relay or transmits an alarm message via Bilinx. With the global scene change detector, it reduces false alarms that can be caused by sudden changes in lighting condition for instance, switching on or off the indoor or security lighting. The SensUp Dynamic feature improves the sensitivity by increasing the integration time up to 10 times on the CCD, providing clear images in low lighting conditions. The NightSense feature helps to increase sensitivity by 9dB in monochrome mode and can be automatically activated in low light situations, or remotely using Bilinx. With Default Shutter, the camera can capture high speed moving objects when sufficient light is available, and the shutter speed returns to default value under low light conditions to maintain sensitivity. With LensWizard, the LTC 0485 detects lens type automatically and helps maintain accurate lens focus. With the multilanguage OnScreen Display power and alarm connections, and a builtin test pattern generator, the camera is easy to install. It comes with preposition and manual override settings. Content Guide and measure linear position for ultrahigh precision and expert workpiece quality Manufacturing productivity and quality absolutely depend on accurate production machine data which is why Bosch Rexroth created the IMS Integrated Measuring System to enhance the value and performance of our linear rail technology. Seamlessly integrated into our ball rail and roller rail systems, Rexroth provides choices The IMSI incremental measuring system, or the IMSA, an absolute length measuring system. Both linear encoders provide accuracy comparable to glass scales without requiring additional machine space and are ideally suited for external measurement applications in systems such as machine tools. IMSA Absolute measurement The IMSA integrated measuring system offers both absolute and incremental coded scales, with the absolute code band completely integrated into the rail. It provides Absolute position information immediately after system startup Cost and space savings, since no additional components such as batteries are required Machine switchon without a reference run, minimizing production rampup time IMSI Incremental measurement The IMSI integrated measuring system uses the inductive measuring principle for noncontact position measuring. Please do not use the information below as a substitute for the information contained in your installation manual. 1. The washing machine drum is secured during delivery with four transit bolts. It is vitally important that these are removed before the appliance is installed and used. They are located at the back of the appliance and are removed with a spanner. Replace them with the blanks provided. Keep the transit bolts safe in case you need to transport the washing machine in the future. 2. You will then need to connect the cold water pipe and waste pipe connection. Check the installation instructions to identify these pipes. You will need to connect the cold water pipe to a cold water tap which is usually marked blue. This connection supplies water to the appliance. See the video below for two different examples of cold water taps. You can stop the water supply by turning the valve. Connect the cold water pipe to the cold water tap, tighten it fully by hand rather than with a tool and then turn the valve back on. Make sure the cold water pipe is not kinked. 3. There are two options for the waste water connection, depending on the plumbing within your home. You can connect to a normal stand pipe which should be at least 30cm high to ensure that no waste water

will reenter the appliance but lower than the height of the appliance itself. You will find one of two waste water pipe holder depending upon the appliance you're fitting. See the video below for two examples of these waste water pipe holders. Use the holder supplied to secure the waste water pipe into position. 4. Alternatively you can attach the waste water pipe to a connection underneath the sink. Under the sink you'll see the waste connections for the appliance. These are called traps and there are a number of different types. If you are connecting to the trap for the first time, you will need to remove a blanking cap which acts as a stopper. See the video below for two variations of these blanking caps.

Check there are no kinks in the pipe and connect the waste water pipe to the trap securely. 5. Bosch washing machines will plug into a standard socket. Contact a qualified professional if you have any questions or concerns about the electrics. 6. You should then check that the appliance is level by using a spirit level. This is particularly important for the installation of a washing machine in order to avoid problems with unbalanced loads. You can raise and lower the feet on the appliance to adjust the appliance level. Also ensure the appliance is stable and that it doesn't rock. If so, adjust the feet so that it is completely stable. 7. To complete the installation, switch on the appliance and run a rinse programme, checking carefully for any leaks. If none are found, move the washing machine into its final position ensuring it remains stable. Connect the cold water pipe to the cold water tap, and connect the waste water pipe to either a stand pipe or to a connection under the sink. Ensure there are no kinks in either pipe. Plug the appliance into a standard socket and check the appliance is level using a spirit level. If not, raise or lower the feet as necessary. Switch the appliance on, run a rinse programme and check for any leaks. If none are found, push the appliance into its final position. First, you simply teach in the 3D positions of the work steps and then put them in the correct sequence. It's easy! Afterwards, all the quality-relevant hand movements of the operator, together with any tool positions, are monitored, guided, and corrected if necessary. Installation and overhead wiring is minimal. In addition, work instructions can be easily created and updated by in-house staff. The Local Positioning System offers much greater flexibility for current and future projects. The range between transmitter and receiver is approximately 4 meters, resulting in a working space diameter of 8 meters per receiver. With a cluster of several receivers, even the most demanding applications can be implemented, e.g. when there is limited visual connection between the transmitter and the receiving unit or when the working area is very large. All receivers within the cluster use a single common coordinate system. Update my browser now By GovtVideo In addition, there's the option to add a pair of Bosch 3D Diffuser Infrared illuminators. In addition, Auto Black delivers clear images in high or low contrast scenes, while SensUp dynamically adapts to lighting changes and boosts nighttime performance. With 3D Diffuser Technology, the illuminators enable images that are evenly lit throughout the foreground and background of the scene. Featuring Constant Light, UFLED illuminators overcome naturally occurring LED degradation to deliver a consistent level of lighting performance. The HSPS Series is compatible with Bosch's Biphase control protocol as well as the innovative Bilinx technology. Bilinx allows two-way communication

over the video cable for easier and more efficient control of camera settings, pan and tilt actions, and camera zoom and focus functions. The HACWAS0520 24 VAC has a tube length of 4 m 13 ft and guarantees a delivery up to 4 m 13 ft.

But in general, locate the oil drain plug and empty the dirty oil into a catch pan. Allow oil to drain completely and then replace the plug. Locate the oil filter and allow residual oil to drain around it. Unscrew and remove the oil filter from its position. Always check to ensure the old gasket came off with the old filter. Compare your old oil filter to your new one to ensure that you have the correct filter replacement. Apply a light coating of used oil to the new filter gasket and install the new filter on the engine by turning it clockwise. Use your hand to spin the filter all the way into the engine. If it is hard to spin it, the threads may not be lined up or you may have the wrong filter. When the oil filter has spun all the way on, use your hand to tighten another threequarters to one full turn. Don't use a tool to tighten the filter or it may be very difficult to remove the next time. As induction heats the pot base and not the hob itself, you can cook on any area of the hob surface you like. You can use your cooktop like a conventional induction hob with separate cooking zones or connect it up at the touch of a button. This is how you gain additional space, for example in order to position large cookware, e.g. a roasting pan, wherever you like. For example, you can now boil 2 litres of water almost three times as fast as on a conventional glassceramic cooktop. Learn more about.

Angle Grinder with Paddle Switch is a beefy angle grinder that provides a no lock multigrip paddle switch for user control and comfort. This grinder delivers 13 amps and up to 11,500 RPM of professional power. The paddle switch provides additional operator control. The tool is designed for long life, featuring directed air flow that diverts dust away from vital components. It is equipped with a two position Vibration Control side handle, making it less strenuous to operate. The grinder has constant electronics for easy starts and dependable speed under load, and it has direct motor cooling for higher overload capabilities. This tool provides security, with an integrated acceleration sensor to limit inadvertent recoil and restart protection to protect against unintended startup. It has a burst protection quick toolless adjustable guard and a large spindle lock for a more convenient disc change. The Service Minder brushes stop the grinder when preventative maintenance is required. Call us at 1877 BOSCH 99 1877 2672 499 or visit the Frequently Asked Questions. This provides you greater convenience to operate the appliance when it suits you be it day or night. After the program starts, the remaining time is displayed. Bigger loads need more water, while smaller loads require less. The load sensor ensures optimal water usage throughout the wash cycle to save water and electricity, and for optimum wash results. The locking mechanism lifts and secures all four glasses at once. Glasses are angled and positioned to provide optimum cleaning and drying with the highest glass protection. Recommended by SCHOTT ZWIESEL. The buttons can also be locked to prevent tampering during operation. This provides best results while making the most of saving water and energy. We recommend using this function once a month or after every 30 wash cycles.

That means even more adjustment options and maximum flexibility. Rackmatic also allows the dishwasher to operate with one side of the top basket angled higher or lower, allowing tall plates in the lower basket and long stem glassware in the top basket to be washed simultaneously. For superior cleaning performance and a quieter wash. That's why all of our appliances have innovative
