The side to be printed on must be face down. CAUTION To prevent damage to your machine caused by paper misfeeding, make sure the paper guides touch the sides of the paper. Make sure that it is completely inserted into the machine. Loading paper in the manual feed slot 2 You can load envelopes and special print media one at a time into this slot. Use the manual feed slot to print or copy on labels, envelopes or thicker paper. Printing on plain paper, recycled paper or transparencies from the manual feed slot 2 Note The machine automatically turns on the Manual Feed mode when you put paper in the manual feed slot. I cannot scan from my Brother Machine or it says that it cannot find the Brother Machine. Linux How can I reduce the time it takes to start feeding paper How can I reduce the time it takes to start feeding paper I can print but cannot scan. I have Windows XP Service Pack 2SP2 installed. What should I do. The site may not work properly if you dont update your browser. If you do not update your browser, we suggest you visit old reddit. Press J to jump to the feed. Press question mark to learn the rest of the keyboard shortcuts Log in sign up User account menu 4 Brother Printer No Paper error even when there is paper Is the problem happening for one or multiple applications Yes. Error message description No Paper, Reload Paper then press Start. Screenshot of error message What steps you have already tried I used Google. I used the Brother suggestions for this problem. Add paper. Clean roller heads. Pull plug and restart. I have also contacted Brother by email. One week. No response. Maybe because of Xmas break. Id recommend inspecting the paper tray and the area that it sits in to see if there is anything broken or stuck in some way. Its hard to see what it looks like physically right now and I dont know the model at all. I do however have a temporary solution that may solve your immediate issue of needing to

print in the next couple days. <http://www.restauracja.jtg-antracyt.pl/files/d300s-manual-guide.xml>

Use the manual feed for whatever you need to print. I do have a couple questions as well related to the troubleshooting process. When did you last successfully use the machine and did anything go wrong before this error occurred. When did you last successfully use the machine and did anything go wrong before this error occurred. A few weeks ago. Nothing happened since then. Use the manual feed for whatever you need to print. Yes, we figured this out. Its not fast enough for printing real estate contracts. Added pics of the paper tray and rollers. Otherwise if your machine thinks you have plain letter loaded and you have thick letter or photo letter set on the job it will tell you to add paper. Also check to make sure your paper tray guides are nice and tight and the machine is registering the correct size. Paper size is Letter and orientation is Portrait. Paper is the same paper we have been using. Have you found a solution. It usually hangs down just above the tray and can detect paper in the tray. Might be able to get some life out of them by roughing them up, but you may need to replace them if thats an option on that model. Not as familiar with Brother units. All rights reserved Back to top. It adds an Ethernet port and delivers slightly faster printing. Unfortunately, the majority of the disappointments we had with the MFC7340 also apply to this device. Physically, the only thing distinguishing the two units is the colour scheme; the MFC7440Ns grey and black fascia offers a somewhat more professional look than the cheaper model. The MFC7440N offers a 250page capacity front paper tray, as well as a manual feeder. However, like the MFC7340, this model suffers from an inadequate paper output tray that doesnt hold enough pages to fulfil typical office printing requirements. We feel that this is almost justifiable given the importance of printer sharing, even in small offices.

Disappointingly, Brother didnt add duplex functionality to the multifunction, another office requirement which may put this multifunction on the dont buy list. Still, there are some redeeming qualities. As with most new multifunctions, the 7440N offers a Scan To function, allowing users to initiate scanning directly from the device and select a destination for the results — choosing which connected computer and type of file. The feature has become a mainstay of both lowend and highend multifunctions. Printing speeds are slightly better than the MFC7340. We were impressed with the MFC7440Ns consistency. At all three quality levels — 300dpi, 600dpi and 1200dpi — the unit will print at a fairly consistent 22.2ppm. It certainly isnt the fastest laser printer out there, but when a page flies out in 2.7sec, there isnt much need for faster printing. The MFC7440N retains the pictureperfect laser quality that makes text look pristine. We didnt expect better or worse from the unit, but were still thankful that the multifunction manages to produce clean text with no sign of pixilation or significant fading, even at 300dpi. Scan quality isnt fantastic, but it suffices for pure text work. Bundled OCR software allows users to easily transform text pages into editable documents; this function can be initiated from the multifunction itself. Image scanning reveals some flaws; the MFC7440N loses some clarity and detail in darker images as a result of significant image saturation. The cost of consumables is 4.8c per page, the same as the MFC7340. This remains cheap enough to warrant the initial price tag. View our privacy policy before signing up. Sign up here Copyright 2013 IDG Communications. Sign up now. Unless you configure your Brother MFC scanner to compile multiple pages into a single scanned document, you will have dozens if not hundreds of unique files to save. You can set up the scanner using either the automatic document feeder or directly from the scanner glass.
