

# brown u0026 sharpe digit-hite plus manual

## General Information

Thank you for purchasing a Brown & Sharpe DIGIT-HITE<sup>®</sup> plus electronic height gage. Industry-leading electronic and mechanical design make DIGIT-HITE<sup>®</sup> plus fast, functional, and easy to use. Using standard height gage inspection techniques, you'll measure accurately to ±.0002"/.006mm with repeatability and resolution to ±.0001"/.002mm over the full 24-inch range of the tool.

Like all Brown & Sharpe measuring instruments, DIGIT-HITE plus has been designed and built to provide years of reliable service. As with any precision tool, it should be handled with care, wiped clean regularly, and stored in a clean, dry place.

This publication is a guide to the operation of the DIGIT-HITE plus electronic height gage. The "Overview" section provides an introduction to the capabilities and operation of DIGIT-HITE plus. "Programs and Operation" explains how to use the tool's dedicated measurement function programs. The "Reference Section" provides more information on other subjects relevant to the use of the tool.

If you would like more information about SPC applications and tooling or other products associated with DIGIT-HITE plus, consult your local Brown & Sharpe industrial distributor or call the factory direct at 1-800-426-1066.

At one go, the enterprise avoided being moved out in the Germanspeaking part of Switzerland. This resulted in the invention of the IMICRO bore gauge with 3line contact. Often copied but never equalled, this mythical handheld tool is still manufactured with as much as nearly hundred of varying models available now, which cover diameters ranging from 3,5 up to 300 mm. At that time, the mechanical engineers were, no doubt, something of a genius to conceive the idea of designing one such product whose principle is quite perfect! This partnership also contributed towards developing its sales in the USA. This connection was an important step in opening new ways for the Swiss enterprise aimed at growing up. The mutation was achieved as TESA moved from its modest workshop of the early days to a modern industrial building. This led it to the development of its first electronic probes. This modular system was made to ensure quality control and statistical data processing within the production area. This innovative highperformance achievement attracted a particular interest from the automotive industry and its subcontractors. This system can measure to uncertainties as low as 20 nanometres. This successful collaboration with NPL continues and these Gauge Block interferometers are now used in many leading calibration laboratories around the world. TESA like many other concerns will not be exempted from the need for rationalization. Nevertheless, in the decade preceding the third millennium, the company could further expand its market presence through the acquisition of some of its competitors such as MERCER LTD.

, ROCH FRANCE along with its subsidiary MAUSER, and COMPAC GENEVE for the main ones. Pursuing to strengthen its market coverage, TESA implemented TESA France SAS, in Luneville. This new affiliated company is now a distribution centre for its products in Europe. Only the pioneering spirit of those early days wasn't getting weaker. Shortly afterwards, the company was proud to have its Quality Assurance System be certified ISO 9001. This is just about right. This was the price TESA had to pay for consolidating its authentic Swiss manufacture while guaranteeing the SWISS MADE Label to its products. No, because TESA could still enhance and expand its product offering as before. Besides the acquisition of CARY, the wellknown brand, which has gained recognition in the watchmaker industry for its gauge blocks, TESA decided to set up a USbased subsidiary with TESA USA in North Kingstown. To achieve this, the latest technologies were used. This operation was to be soon followed by the acquisition of SUD MESURES, a Francebased company specialised in the design of vision systems. Taking advantage from its privileged position within HEXAGON Metrology, TESA could make use from timetested manufacturing techniques and have this product development completed in a very short time. To achieve this, the production line had to be thoroughly reviewed. Furthermore, facing the economic trends, the company is just about to have its own office for direct sales and customer support in China. This year also, TESA expands its range of TESASTAR products by adding a probe rack for automatic probe exchange besides many other valuable accessories such as the extension rods, probe tips and styli, interface units compatible with the variety of metrology software versions applied. With the launch on the market of the motorised version of its small MH3D, TESA continues to extend its product offering for threedimensional measurement, rapidly and significantly.

Of robust design and with a long battery life, this probe has been engineered to operate in the most hostile of ambient conditions. The userfriendly automation function, combined with TESAREFLEX software, makes the measurement process easier, no more need to be a specialist. Moreover, TESA relies on its distribution network with independent agents, distributors and resellers strengthening its market coverage worldwide. The spartan workshops of those early days have ceded their place to Hightech production cells. But the pioneering spirit that inspired the craftsmen of yore and that is transmitted to new generations remains unchangeable. TESA makes a point of honor to contribute in a meaningful way to the renown of the SWISS MADE label and this can, without a shadow of doubt, be considered one of its greatest sources of pride. The power supply is a 9VDC 300MA ac adapter. It appears that there is a rechargeable battery in the unit. You use the AC adapter to charge it up. Im looking for a manual.

I never did resolve it until now, sort of, I put the indicator project on the back burner because I wasn't coming up with anything that helped and I had other projects lined up before, not to mention prepping for the holidays. I had a lull in projects today so I figured I check the response I originally posted. I don't think I have a battery in mine. I opened the back and all I see is a circular disc plate. nothing that resembles a battery. do you think the power supply would still work. I couldn't tell yet if there is a soft stop, although I could feel a little resistance in the plunger, which may be dirty, at most. I don't want to clean it just before powering it. This way I can tell if it's a similar problem as

your or just needs to be cleaned. I just got one, the AC adapter was bad. I'm looking for a manual. I wonder if I need a new battery for it, if so would you happen to know the description of the battery I never did resolve it until now, sort of, I put the indicator project on the back burner because I wasn't coming up with anything that helped and I had other projects lined up before, not to mention prepping for the holidays. This way I can tell if it's a similar problem as your or just needs to be cleaned. The CNCZONE software does that. As long as the polarity is correct, the correct plug, voltage and current, it should be ok. I need to take the back off mine to see why it sticks toward the end of the travel. Again, be sure you got the right power supply. Keep me posted on your progress, They are very expensive indicators. Marty The CNCZONE software does that. Keep me posted on your progress, They are very expensive indicators. Marty So, after testing the battery and getting less than 5 volts read on my DMM I suspect the battery needs replacing, this, after having the dial indicator plugged for nearly eight hours. So I'll be ordering a new battery from Jameco or Newark. I'll keep you posted on the next adventure.

So, after testing the battery and getting less than 5 volts read on my DMM I suspect the battery needs replacing, this, after having the dial indicator plugged for nearly eight hours. I'll keep you posted on the next adventure. I take it you took the back off to find the battery. Can you see the mechanism. Wondering if I will be able to see why mine sticks at .900. I assume yours has smooth travel the full distance. Marty I take it you took the back off to find the battery. Wondering if I will be able to see why mine sticks at .900. I assume yours has smooth travel the full distance. Marty I didn't take the back off, I went in via the front face of the indicator. I ordered the battery from Jameco but it turned out to be the wrong one, so I had to send it back. Now more waiting. The mechanism is actually a micro glass scale much like the DROs uses. Mine sticks at around the same distance. .897-.900 I don't know why this is, although the plunger tip has a bit of rust it's not enough travel to the tip to interfere. I'll shoot finding and replacing the battery. I'll show the battery and how to find online, then removal and replacement of battery. Again, I'll keep you posted. I didn't take the back off, I went in via the front face of the indicator. I'll show the battery and how to find online, then removal and replacement of battery. Again, I'll keep you posted. A YouTube video on the disassembly of the face and the replacement of the battery appreciated. Interesting then that they both seem to stick at .900ish. Marty Probably the same one used in Mitutoyo Calipers 541980 Replacement Battery Mitutoyo MyCAL Digital Caliper Precision Tools Light Tool Supply Once you see what battery you need from Brown and Sharpe tech support, I am sure Radio Shack carries it. Thank you, Michael Elson Light Tool Supply The site is 100% free to join and use, so join today! PQI offers a full line of height gages from all of these vendors to help you with all of your manufacturing requirements.

[www.musicmaestrosdiscos.co.uk/wp-content/plugins/formcraft/file-upload/server/content/files/16274b65a58cfe--brother-fax-575-manual.pdf](http://www.musicmaestrosdiscos.co.uk/wp-content/plugins/formcraft/file-upload/server/content/files/16274b65a58cfe--brother-fax-575-manual.pdf)

Our height gages will help with first piece and layout inspection to tool setup and incoming inspection. Each of these models offers a full range of measuring capability and, when combined with optional features and special accessories, can be custom designed to solve any shop floor measuring problem. Any of these height gages will make two dimensional measurements with a single axis height gage fast and easy. If you are looking for something more than a caliper but not as difficult to use as a coordinate measuring machine, then try one of our height gages in your shop. If you purchase one of the height gages, be sure to invest in one of the surface plates that PQI offers on our website. To make the best measurements, you need a solid foundation for your height gage. Contact Us. The manual displacement is for used operator fast and safe.
