A Pilot Investigation Comparing Instructional Packages for MTS Training: "Manual Alone" vs. "Manual-Plus-Computer-Aided Personalized System of Instruction"

Marileide Oliveira
Department of Psychology
Federal University of São Carlos

Celso Goyos

Joseph Pear
Department of Psychology
University of Manitoba

Abstract

Matching-to-sample (MTS) training consists of presenting a stimulus as a sample followed by stimuli called comparisons from which a subject makes a choice. This study presents results of a pilot investigation comparing two packages for teaching university students to conduct MTS training: Two groups—control and experimental—with 2 participants in each group were used. Accuracy in conducting MTS training was assessed during baseline and post-training. During training the control group received a manual, and the experimental group received both the manual and computer-aided personalized system of instruction or CAPSI. Baseline and post-training combined scores for control and experimental groups were 72.5% and 100%, and 72.7% and 95%, respectively. Results showed that the manual and the manual plus CAPSI packages produced similar effects in delivering knowledge in MTS training. We suggest that future studies using a larger sample size are necessary. In addition, we suggest that it is necessary to test new versions of the manual and the interaction of CAPSI with other components, such as demonstration videos.

Matching-to-sample (MTS) training consists of tasks in which a stimulus is presented and followed by two or more stimuli called comparisons. The subject makes a choice, for establishing conditional stimulus relations between the sample and its correct comparison (Green & Saunders, 1998). A number of research studies have investigated MTS training to produce stimulus equivalence, defined as responding in accord with behavioral tests of reflexivity, symmetry, and transitivity (Arntzen & Lian, 2010), and also to teach a wide range of academic repertoires such as reading (Saldana, 1971), writing (Stroner & Mackay, 1993), statistics (Critchfield & Fiensup, 2010; Fields, Travis, Roy, Yallovker, Aguiar-Rocha, & Sturmer, 2009), manual signs (Elias, Goyos, Saunders, & Saunders, 2008), mathematics skills (Lynch & Caves, 1995), braille literacy skills (Toussaint & Tiger, 2010), and brain-behavior relations (Fiensup, Covey, & Critchfield, 2010). MTS tasks have also been used to investigate the acquisition of more elementary verbal relations,

such as facts and pre-requisites for mands (Ribeiro, Elias, Goyos, & Miguel, 2010). Results suggest that MTS training may represent a powerful teaching tool for use in educational settings.

To date, however, few studies have investigated applications of MTS training in the classroom (Rehfeldt, 2011). In one of the first attempts to address this issue, Stroner, Mackay, and Stoddard (1992) published an article aimed to provide an applied approach for using MTS training to teach repertoires such as reading. In this work, the authors define reading based on the notion of equivalence networks involving dictated words and printed words (AC), and spoken words by the student (Figure 1).

Accordingly, using MTS training to teach reading usually involves explicit teaching of relations between dictated words and pictures (AB) and between dictated words and printed words (AC). In an MTS task involving the relation AB, a dictated word is presented as sample. As soon as the child responds to the sample (e.g., by pointing to it), two or more pictures are presented as comparisons. The child then selects one of the comparisons and, as a result, she or he receives either praise for selecting the comparison arbitrarily defined as correct, or a brief time-out period for selecting any other comparisons. MTS tasks involving the relation AC are presented in a similar manner, except that printed words are presented as comparisons. The child's performance in these tasks cannot be considered as reading though, because she or he could meet accuracy criterion simply by memorizing

Reload to refresh your session. The concepts presented here are very general. These are global concepts that make a computer. Students who are already accustomed to computer work can skim this section quickly, because it will be for them a review. This section should help students who are not familiar with the basic concepts to understand the rest of this document. After completing this tutorial you will find yourself at a moderate level of expertise in computer basic from where you can take yourself to next

levels. Globally, people rely on computer technology to grow their careers, improve their lives, and to expand their opportunities. The course will run you through all of the basic concepts and techniques of using a personal computer, getting you up to speed with modern personal computing technology in no time at all. Start now and learn at your own pace. But a huge amount of people don't fully understand all the things they can do with their computers. There are so many features that they don't know how to use, so many possibilities they are not taking advantage of. Many people think they know the basics about computers, but really don't. The course will then cover Microsoft computer applications so that you can fully use these vital tools of modern life. It will train you in touch typing, so that using your computer becomes smoother and easier. It will then run you through more advanced functions such as data input and formatting, before finally running you through really practical uses of your new knowledge.

Computer skills can do so much for so many, and even if you are already a proficient computer user, you can get a lot out of this course. There are tools and functions in this little machine that you never knew about. This course will guide you through some of the best ones. You'll learn about IT safety and environmentally friendly ways to dispose of computer parts. You will know the legal matters involved in IT and gain a greater knowledge of computer software and hardware. You will have the skills to manage multiple files effectively. This course will teach you touch typing as well as how to use email and word processing applications, tasks that will help you to accomplish your daily goals. To successfully complete this Certificate course and become an Alison Graduate, you need to achieve 80% or higher in each course assessment. Once you have completed this Certificate course, you have the option to acquire an official Certificate, which is a great way to share your achievement with the world. Your Alison Certificate is Ideal for sharing with potential employers include it in your CV, professional social media profiles and job applications An indication of your commitment to continuously learn, upskill and achieve high results An incentive for you to continue empowering yourself through lifelong learning Alison offers 3 types of Certificates for completed Certificate courses Digital Certificate a downloadable Certificate in PDF format, immediately available to you when you complete your purchase Certificate a physical version of your officially branded and securitymarked Certificate, posted to you with FREE shipping Framed Certificate a physical version of your officially branded and securitymarked Certificate in a stylish frame, posted to you with FREE shipping All Certificates are available to purchase through the Alison Shop. For more information on purchasing Alison Certificates, please visit our FAQs.

If you decide not to purchase your Alison Certificate, you can still demonstrate your achievement by sharing your Learner Record or Learner Achievement Verification, both of which are accessible from your Dashboard. For more details on our Certificate pricing, please visit our Pricing Page. Find out, with Alison. Centres should be attempting to instruct learners in the latest developments. As computing develops and new features become common, so minor inclusions will be added e.g. range of computer CD devices. Deep technical details are not expected, although it must be pointed out that learner performance in past papers suggests that superficial coverage in particular areas often results in learner misconceptions. Practical experience of the use of common generalpurpose packages word processing, database, spreadsheet etc. is essential. A significant part of the paper will test these. We ask Senior Examiners to comment on five or more responses in terms of why the mark was awarded with commentary about how to improve the answer if necessary. By continuing you are giving consent for us to set Cookies. Learn More Yes, I agree. NOVA was the first institution to release an entire OER degree pathway. Jim Shannon led the development of ITE 115 Introduction to Computer Applications and Concepts. If you believe that. Some programs focus more on operating

basic software such as Microsoft Office while others focus on more intermediate and advanced topics such as using HyperText Markup Language HTML, graphics design software such as Adobe InDesign and Adobes photoediting application Photoshop. The course often includes information about the social, political and economic effects of Internet and technology on society. Students examine modern examples of how technology is used for research and communication. A course such as this can be taken as a beginning part of many programs to ensure students can use computers.

Occasionally, this course touches on touch typing, requiring students to get typing speed up to a certain number of words per minute, usually around 45. They add animation and sound to computer graphics, practice the basics of Web design and find ways to develop the basics to create more advanced designs. Desktop publishing techniques are often included, and students practice using software programs to edit Web pages and prepare them for publication. Students also edit photos and modify them by adding or removing colors, lightening, darkening and making photos presentable for print or Web publication. They also optimize images and layer them to create fuller, richer designs. Photoshop is an advancedlevel application and so courses for it are typically taken late in the certificate or degree program. They learn and incorporate computer programming languages in HyperText Markup Language HTML and Cascading Style Sheets CSS to design, publish and maintain a Web site. The students taking this class learn how to incorporate links to and from other Web pages and also add videos and images, editing them to fit the screen. Some programs include training for Adobe InDesign, which allows users to finetune graphics, layout and photos using a complex but powerful desktop publishing application. Commonly used applications, such as those. Commonly used applications, such as those. Web. 1 Sep 2020 accessed. Retrieved from. Less is being spent on training, but this need not reflect a fall in training standards, if better career planning and careful appraisal of training methods are undertaken.
